Gross National Income (GNI) in Purchasing Power Parity (PPP) per capita

US dollars

The **Gross National Income** (GNI), formerly Gross National Product (GNP), represents the broadest measure of national income. It measures the total value added from domestic and foreign sources claimed by residents.

The **Purchasing Power Parity (PPP)** dollar estimates the cost required to buy the same amount of goods in any country. The PPP is below the value of the US dollar in countries where the general price index is lower than that of the United States, and above it where prices are higher.
